**45-day Public Review from  
February 21, 2025 to April 7, 2025**

♦ **1<sup>st</sup> Public Review of BSR/ASHRAE Addendum b to ANSI/ASHRAE Standard 90.4-2022, *Energy Standard for Data Centers***

Addendum b makes updates and changes to electrical load equipment definitions, including a definition for UPS Redundant Capacity to clarify the fact that UPS efficiency must be based on the total available capacity of the UPS, including its redundant capacity, even though that additional capacity is not intended to be used under normal operating conditions. Informative appendices have also been updated to highlight changes regarding the different build out options data centers typically undergo for design and permitting.

♦ **1<sup>st</sup> Public Review of BSR/ASHRAE Standard 41.4-2015, *Standard Methods for Proportion of Lubricant in Liquid Refrigerant Measurement***

This standard prescribes a method for measuring the proportion of lubricant in liquid refrigerant. This standard uses the gravimetric method as the primary method, but alternative methods can be used if those methods are calibrated against the primary method. This standard does not apply to collected samples that contain less than 0.001 g (0.015 grains) of lubricant.
